

## CONTENTS

<b>C. M. Ablow:</b> Wave refraction at an interface . . . . .	15
<b>Dang Dinh Ang:</b> Transient motion of a line load on the surface of an elastic half-space . . . . .	251
<b>H. R. Bailey:</b> Conduction-convection from a cylindrical source with increasing radius . . . . .	325
<b>R. Bellman:</b> Dynamic programming approach to optimal inventory processes with delay in delivery . . . . .	399
<b>J. H. Bick and G. F. Newell:</b> A continuum model for two-directional traffic flow . .	191
<b>M. A. Biot and I. Tolstoy:</b> Canonical and Hamiltonian formalism applied to the Sturm-Liouville equation . . . . .	163
<b>B. A. Boley:</b> Upper bounds and Saint-Venant's principle in transient heat conduction . . . . .	205
<b>Jin H. Chin and S. W. Churchill:</b> Incorporation of error function absorption coefficient in transport equation . . . . .	93
<b>P. M. Chirlian:</b> The physical realizability and realization of linear phase shift networks . . . . .	31
<b>S. W. Churchill</b> ( <i>see Jin H. Chin</i> )	
<b>R. C. DiPrima:</b> Some variational principles for problems in hydrodynamic and hydromagnetic stability . . . . .	375
<b>W. S. Dorn:</b> Duality in quadratic programming . . . . .	155
<b>R. J. Duffin:</b> The Rayleigh-Ritz method for dissipative or gyroscopic systems . . .	215
<b>G. M. Ewing:</b> A fundamental problem of navigation in free space . . . . .	355
<b>S. M. Genensky:</b> A general theorem concerning the stability of a particular non-Newtonian fluid . . . . .	245
<b>C. D. Ghildyal:</b> Unsteady motion of an infinite liquid due to the uniform rotation of a sphere, $r = a^*$ . . . . .	396
<b>R. E. Gibson:</b> A one-dimensional consolidation problem with a moving boundary . .	123
<b>H. P. Greenspan:</b> On the flow of a viscous electrically conducting fluid . . . . .	408
<b>J. F. Heyda:</b> A note concerning hyperbolic equations with constant coefficients . .	299
<b>P. G. Hodge, Jr.:</b> The Mises yield condition for rotationally symmetric shells . .	305
<b>R. P. Jerrard:</b> Vibration of quartz crystal plates . . . . .	173
<b>F. C. Karal, Jr.</b> ( <i>see S. N. Karp</i> )	
<b>S. N. Karp and F. C. Karal, Jr.:</b> Vertex excited surface waves on one face of a right angle wedge . . . . .	235
<b>W. M. Kincaid:</b> A two-point method for the numerical solution of systems of simultaneous equations . . . . .	313
<b>K. Klotter and E. Kreyszig:</b> Amplitudes of oscillations governed by a modified Van Der Pol equation . . . . .	61
<b>J. K. Knowles:</b> Large amplitude oscillations of a tube of incompressible elastic material . . . . .	71
<b>E. Kreyszig</b> ( <i>see K. Klotter</i> )	
<b>R. S. Lehman:</b> The uniqueness question for waves against an overhanging cliff	271
<b>B. A. Lippmann:</b> On the Sommerfeld half-plane problem . . . . .	301
<b>F. J. Lockett</b> ( <i>see I. N. Sneddon</i> )	

<b>M. Lotkin:</b> The calculation of heat flow in melting solids . . . . .	79
<b>J. W. Miles:</b> Homogeneous solutions in elastic wave propagation . . . . .	37
<b>H. W. Milnes and R. B. Potts:</b> Numerical solution of partial differential equations by boundary contraction . . . . .	1
<b>P. M. Naghdi and W. C. Orthwein:</b> Response of shallow viscoelastic spherical shells to time-dependent axisymmetric loads . . . . .	107
<b>P. M. Naghdi:</b> A note on rigid body displacements in the theory of thin elastic shells . . . . .	296
<b>J. D. Neethling:</b> On the non-existence of transonic perturbations . . . . .	229
<b>G. F. Newell</b> ( <i>see J. H. Bick</i> )	
<b>W. C. Orthwein</b> ( <i>see P. M. Naghdi</i> )	
<b>B. Paul:</b> A simplified geometric proof of the reciprocal stress theorem . . . . .	395
<b>L. E. Payne</b> ( <i>see W. H. Pell</i> )	
<b>W. H. Pell and L. E. Payne:</b> The Stokes flow about a spindle . . . . .	257
<b>H. Poritsky and R. A. Powell:</b> Certain solutions of the heat conduction equation . . . . .	97
<b>R. B. Potts</b> ( <i>see H. W. Milnes</i> )	
<b>R. A. Powell</b> ( <i>see H. Poritsky</i> )	
<b>W. Prager:</b> An elementary discussion of definitions of stress rate . . . . .	403
<b>W. H. Reid:</b> The oscillations of a viscous liquid drop . . . . .	86
<b>M. Rosenblatt:</b> Some comments on narrow band-pass filters . . . . .	387
<b>S. Schechter:</b> Quasi-tridiagonal matrices and type-insensitive difference equations . . . . .	285
<b>L. A. Segel:</b> Application of conformal mapping to viscous flow between moving circular cylinders. . . . .	335
<b>R. T. Shield:</b> Plate design for minimum weight . . . . .	131
<b>P. Slepian:</b> On paramount matrices . . . . .	263
<b>I. N. Sneddon and F. J. Lockett:</b> On the steady-state thermoelastic problem for the half-space and the thick plate . . . . .	145
<b>Lu Ting:</b> On the diffraction of an arbitrary pulse by a wedge or a cone . . . . .	89
<b>I. Tolstoy</b> ( <i>see M. A. Biot</i> )	
<b>A. I. Weinzwieg:</b> The Kron method of tearing and the dual method of identification . . . . .	183
<b>L. Weiss:</b> On the strong converse of the coding theorem for symmetric channels without memory . . . . .	209
<b>Chia-Shun Yih:</b> Corrections to the paper "Thermal instability of viscous fluids" . . . . .	300
<b>A. H. Zemanian:</b> Further properties of certain classes of transfer functions . . . . .	223
<b>A. H. Zemanian:</b> Non-decreasing step responses whose transfer functions are subclass $K^*$ . . . . .	363
<b>BOOK REVIEWS.</b> 14, 30, 36, 60, 70, 78, 122, 130, 154, 182, 222, 234, 244, 270, 312, 334, 354, 374, 386, 394, 412.
